

Test Case Template

To complete the test case plan, fill out the information for Project, Course, Description and Date in the header below.

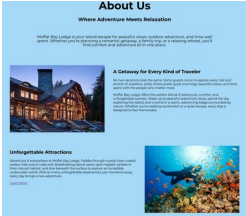

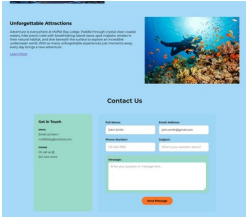

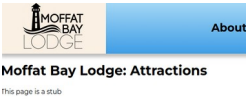

Project: Moffat Bay Lodge	
Course: CSD460 Capstone in Software Development	
Description: Test the About Us and Reservation Summary	
Date: 2026/09/13	

TABLE OF CONTENTS

About Us Page Content and Navigation.....	2
Contact Us Form Input and Validation.....	3
Reservation Summary Details and Calculations.....	5
Reservation Editing and Confirmation.....	6

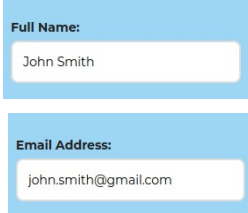

Test Case Template

For each test, the developer should: provide a test description, a test objective, the developer name and date tested. For each step, fill out the actions to be taken and describe the expected results, and indicate yes or no for each step depending upon the result. The peer tester should provide their name, date tested, indicate yes or no for each step depending upon the result, and a screenshot (thumbnail) of the result.

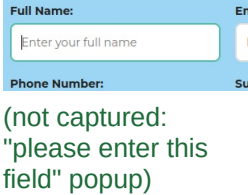

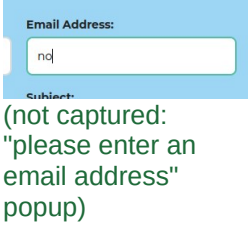

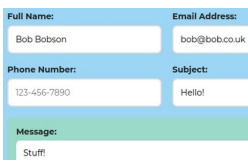

Test 1	About Us Page Content and Navigation			
	Test Objective: Verify that the About Us page displays the correct content, images, contact information, and working navigation links.	Developer: Jose Date tested: 2026/09/13	Peer tester: Isaac Date tested: 2026/09/13	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail + Screenshot
1	Click on About from the Moffat Bay Lodge navigation bar.	The About Us page loads without errors and displays the shared navigation header, About Us title, and lodge information.	yes	yes 
2	Scroll through the About Us page and review the lodge and attractions sections.	The lodge and scuba images load, the page text is readable, and the sections display without missing or overlapping content.	yes	yes 
3	Click the "Learn More" link in the Unforgettable Attractions section.	The user is taken to attractions section. Page 2 of 8	yes	yes 

Test Case Template

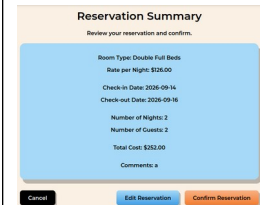

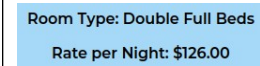

4	Return to the About Us page and select the displayed lodge email address.	The email link opens the device's default email application and addresses a message to moffatbay@outlook.com.	yes	yes 
5	Select the displayed lodge telephone number.	The telephone link starts a call prompt for 641-444-4444 on a supported device or browser.	yes	yes 
Comments	Page elements load quickly and correctly. Attractions page is still a stub, but link is valid. This browser was not configured with a method to open email or telephone links, but the links themselves are correctly formed and should work on supported browsers.			

Test 2	Contact Us Form Input and Validation			
	Test Objective: Verify that the Contact Us form correctly validates required information, rejects invalid entries, and successfully submits valid contact information.	Developer: Jose Date tested: 2026/09/13	Peer tester: Isaac Date tested: 2026/09/13	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Open the About Us page while logged in and scroll to the Contact Us form.	The Full Name and Email Address fields are populated with the logged-in user's information, and the remaining contact fields are available for entry.	yes	yes 
2	Clear the required fields and click Send Message.	The form is not submitted, and the browser identifies the required Full Name, Email Address, Subject, and Message fields.	yes	yes

Test Case Template

				
3	Enter an invalid email address while completing the other required fields, and click Send Message.	The form is not submitted, and the user is prompted to enter a valid email address.	yes	yes 
4	Enter a valid full name, email address, optional phone number, subject, and message.	Each value appears correctly in its corresponding field and is ready to be submitted.	yes	yes 
5	Click Send Message after all required fields contain valid data.	The contact form is accepted without a validation or database error, and the message is saved for lodge staff to review.	yes	no 
Comments	Upon submission, the contact message was created in the database. However, no redirect happened, leaving me with a blank white page. It's essential that the user is sent to a confirmation page to avoid them going back and resubmitting multiple requests.			

Test Case Template

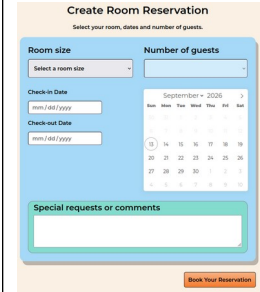

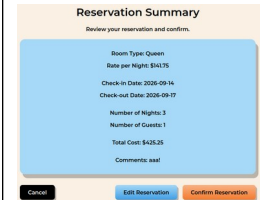

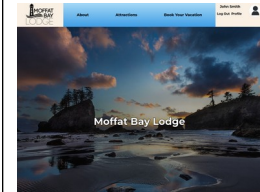

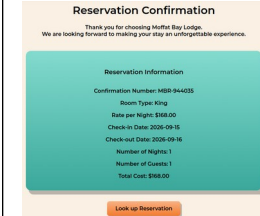

Test 3	Reservation Summary Details and Calculations			
	Test Objective: Verify that the Reservation Summary page accurately displays the submitted room, guest, date, and special-request information and correctly calculates the number of nights and total cost.	Developer: Jose Date tested: 2026/09/13	Peer tester: Isaac Date tested: 2026/09/13	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Log in, open Book Your Vacation, select a room type and valid guest count, choose a date range, enter a special request, and click Book Your Reservation.	The Reservation Summary page loads without errors and displays the reservation information submitted by the user.	yes	yes 
2	Compare the room type and nightly rate on the Reservation Summary page with the room selected on the reservation form.	The selected room type is correct, and the displayed nightly rate matches the lodge's rate for that room.	yes	yes 
3	Compare the check-in date, check-out date, and guest count with the information entered on the reservation form.	The check-in date, check-out date, and number of guests exactly match the submitted reservation information.	yes	yes 
4	Review the displayed number of nights and the special request.	Number of Nights is displayed, and the special request appears as readable text without changing the page layout.	yes	yes

Test Case Template

				Number of Nights: 2 Number of Guests: 2 Total Cost: \$252.00 Comments: a
5	Verify the total cost shown for the three-night stay.	The total equals the room's nightly rate multiplied by 3 and is formatted as currency with two decimal places.	yes	yes* Number of Nights: 2 Number of Guests: 2 Total Cost: \$252.00 Comments: a
Comments	Test did not indicate to choose a 3-night stay, but 2 nights * \$126.00 = \$252.00, verifying the total price calculation. Information is clearly presented, and representative of what was entered into the form.			

Test 4	Reservation Editing and Confirmation			
	Test Objective: Verify that users can edit or cancel an unconfirmed reservation and successfully confirm a valid reservation, resulting in a confirmation page with the correct reservation details and confirmation number.	Developer: Jose Date tested: 2026/09/13	Peer tester: Isaac Date tested: 2026/09/13	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	From the Reservation Summary page, click "Edit Reservation."	The user returns to reservation page without creating a reservation and can enter revised information.	yes	yes

Test Case Template

				 The screenshot shows the 'Create Room Reservation' form. It includes fields for 'Room size' (a dropdown menu), 'Number of guests' (a text input), 'Check-in Date' (a date picker), and 'Check-out Date' (a date picker). There is also a 'Special requests or comments' text area and a 'Book Your Reservation' button at the bottom right.
2	Change the room type, guest count, or dates; then click Book Your Reservation again.	The Reservation Summary page displays the revised values and recalculates the number of nights and total cost correctly.	yes	 The screenshot shows the 'Reservation Summary' page. It displays the reservation details: Room Type: Queen, Rate per Night: \$141.75, Check-in Date: 2028-09-16, Check-out Date: 2028-09-17, Number of Nights: 1, Number of Guests: 1, Total Cost: \$141.75, and Comments: null. There are 'Cancel', 'Edit Reservation', and 'Confirm Reservation' buttons at the bottom.
3	Click "Cancel" on the Reservation Summary page.	The user returns to home, and the unconfirmed reservation is not created.	yes	 The screenshot shows the 'Moffat Bay Lodge' home page. It features a navigation bar with links for 'Home', 'About', 'Reservations', 'Book Your Reservation', and 'Contact Us'. The main content area has a large image of a lodge and the text 'Moffat Bay Lodge'.
4	Create another valid reservation, review the summary, and click "Confirm Reservation."	The reservation is created once, and the user is redirected to the reservation confirmation page.	yes	 The screenshot shows the 'Reservation Confirmation' page. It displays the reservation details: Confirmation Number: MBR-944025, Room Type: King, Rate per Night: \$148.00, Check-in Date: 2028-09-16, Check-out Date: 2028-09-17, Number of Nights: 1, Number of Guests: 1, and Total Cost: \$148.00. There is a 'Look Up Reservation' button at the bottom.

Test Case Template

				7 1 MBR-944035
5	Review the reservation confirmation page and its confirmation number.	A confirmation number beginning with MBR- and the saved reservation details are displayed without errors.	yes	yes Reservation Information Confirmation Number: MBR-944035
Comments	Backing off with an "edit" or "cancel" selection works as expected, with no changes to the database or other lasting effects. The confirmation number was easy to find in the database, showing agreement with what the confirmation said it had done and what it did. However, going to the URL bar I saw something interesting: <code>n_confirmation.php?reservation_id=7</code> Seeing this I suspected a security problem, and sure enough, editing this to 3 surfaced a different confirmation:  This reservation was not made by John Smith, making this a potential site for data harvesting.
