

Moffat Bay Lodge

Created by, Isaac, Patrice, Jose, and Cannon

The Team - Jose

I worked on the Login Page, the Lookup Reservation Page, and an error and confirmation page for the Contact Us Page. Additionally, I helped with the test plans and created the outline for our video.

The Team - Patrice

Hello, this is my first development project as a student.

I participated in the technical design document. I helped create the user personas, user stories, and we all “played” a planning poker session to determine the work tasks.

I then built the reservation, the reservation summary, and the reservation confirmation page mockups

I did some updates to the ERD concerning the RBAC tables.

I then built the 3 reservation pages as mockups with Isaac’s help on the JavaScript parts. I found a new passion for CSS and had a blast through trial and error, especially because it appears on the screen immediately and can be corrected and improved.

I also participated in page testing by creating a test plan and conducting a peer test on another page.

I finally integrated the last-minute client logo on the landing page and performed a beta test with a user.

The Team - Isaac

I wrote the database capability, the user registration page, and the user info widget at the top right corner. I've been a security advocate in the team, chasing down anything that smells like a CORS vulnerability or leaky reservation id's.

Project Overview

The required pages are:

- A landing page for marketing the lodge.
- An About Us page.
- A Contact Us page.
- An Attractions page that includes hiking, kayaking, whale watching, and scuba diving.
- A Registration page.
- A Login page.
- A Reservation/Book Your Vacation page.
- A Reservation Summary page.
- A Reservation Lookup page.

Prototypes

Attractions

The Marina

From kayaking and canoeing to boat rentals and unforgettable whale-watching tours, Maffet Bay Marina makes it easy to get out on the water and experience the beauty of the island from a whole new perspective.

About Us

Where Adventure Meets Relaxation

Moffat Bay Lodge is your island escape for peaceful views, outdoor adventure, and time well spent. Whether you're planning a romantic getaway, a family trip, or a relaxing retreat, you'll find comfort and adventure all in one place.

A Getaway for Every Kind of Traveler

No two vacations look the same. Some guests come to explore every trail and stretch of coastline, while others prefer quiet mornings, beautiful views, and time spent with the people who matter most.

At Moffat Bay Lodge, you can create the stay that fits you. Spend your days hiking scenic trails, kayaking along the coast, watching whales in their natural habitat, or scuba diving beneath the surface. When the day's adventures are over, return to the comfort of the lodge and relax.

A Marina Right at Your Doorstep

Moffat Bay isn't just a place to stay; it's a gateway to the water. Our modern marina offers convenient long-term slips and easy access to the surrounding San Juan Island waterways.

Whether you're arriving by boat or simply enjoying the waterfront views, the marina adds a distinctive coastal experience to your stay

A wide-angle photograph of a coastal scene at sunset or sunrise. The sky is filled with large, dramatic clouds in shades of blue, orange, and pink. The sun is low on the horizon, casting a warm glow. In the foreground, a sandy beach is partially submerged in shallow water, with several large, dark rocks scattered throughout. The water reflects the colors of the sky. In the background, a rocky cliff with a few trees stands on the left, and a hillside with more trees is on the right.

Moffat Bay Lodge

Tests

Test: Verify that all text and images load properly on the Attractions Page

Test passed. Tester noted concerns about reactivity. Page later confirmed to display well on mobile devices.

Tests

Test: Verify that the Contact Us form correctly validates required information, rejects invalid entries, and successfully submits valid contact information.

Test failed. Page rejected invalid information and accepted valid information. Contact messages appeared in the database. However, no redirect happened, so the user arrived at a blank page.

Tests

Test: Ensure user is able to input data for registration, and data is saved to database when submit is clicked.

Test passed. Tester noted that page did a good job of giving validation feedback, and the form was easy to understand.

Tests

Test: Ensure that using an MBR number on the Reservation Look-Up page brings up reservation details associated with it.

Test passed. Not only was MBR able to be loaded without error, but invalid entry showed an error directly on the lookup page.

Demo

You should have received a demo video in the previous post.

What Went Right

- We maintained strong communication and consistently stayed in touch throughout the project.
- We used GitHub effectively and followed a well-organized, structured branching system.
- We worked hard to meet the client's expectations and quickly implemented any changes or feedback they requested.
- We divided the workload fairly and consistently completed our assigned tasks on schedule.

Lessons Learned As A Team

Isaac-

- I think Trunk Based Development worked out really well for us, and I'd recommend it to similar groups in the future. It gave us a really tight loop with a lot of review opportunities in it.,
- Testing was a real surprise - both peer tests and QA gave us a lot of valuable insight. I often don't have access to as many testers as I'd like, and this really showed what kind of quality improvements you can get from them.

Lessons Learned As A Team

Patrice-

- This was my first project so i learned during the whole process and i put a "face" on everything we learned during the year. even if we had assignments it's very different to do it in a project and a team setting. I learned to listen and take everyone point of view. Still have work to do on that part though.

Lessons Learned As A Team

Jose-

- I learned many things during this project, but the biggest was collaborating on a coding project with multiple people. I had never done anything like that, so it was great to see how each person worked on their part before we all merged everything.
- I learned many new techniques from my peers. We all write code slightly differently, so it was nice to pick up some new ideas. It was interesting to see how we all worked as individuals, but then came together to make edits and see the project through to the end.
- Additionally, I learned how to use GitHub. I have not had many projects using the site and all of its features. The site guided us through this process. I will continue to use it for future projects and learn more.

Thank You!

- Please leave us some feedback in the replies!
